Little Stool - [Antonio Arico'](#)

Simple to build, Little Stool plays with the archetype of a common stool. Minimal but with characterful details, his legs located in front and in the back form layers and shadows. This re-adaptation gives more visual depth to a simple stool and brings stability and strength.

Fun and playful, the stools can be put together to become a couple or friends. Having one is useful, two or three is even more practical and it is the perfect gift to kids or young adults that we all are.
